

IOT HOLIDAY ASSIGNMENT

1) Write a Embedded C program to Create a Weather Reporting System that provides real-time environmental data to users.

```
#include <Wire.h>
#include <WiFi.h>
#include <ArduinoJson.h>
#include <Adafruit_GFX.h>
#include <Adafruit_SSD1306.h>
#include <ThingSpeak.h>

#define SCREEN_WIDTH 128
#define SCREEN_HEIGHT 64
```

```
Adafruit_SSD1306 display(SCREEN_WIDTH, SCREEN_HEIGHT, &Wire, -1);
```

```
const char* ssid = "Wokwi-GUEST"; const char* password =
"";
String APIKEY = "8c9f6eac52a56ea89b8c36162a6d60c7";
String CityID = "1185241"; // Example City ID WiFiClient client;
char servername[] = "api.openweathermap.org";
String result;
```

```
unsigned long channelID = 2235258; const char*
writeAPIKey = "TU90PCW31HECJ1V5";
```

```
void setup() {
  Serial.begin(115200);

  WiFi.mode(WIFI_STA);
  WiFi.begin(ssid, password);
  display.begin(SSD1306_SWITCHCAPVCC, 0x3C); delay(200);
  display.clearDisplay(); display.setTextSize(1);
  display.setTextColor(SSD1306_WHITE); display.setCursor(0, 0);
  display.print("Connecting..."); display.display();
  while (WiFi.status() != WL_CONNECTED) { delay(500);
    Serial.print(".");
    display.print("."); display.display();
  }
}
```

```

display.clearDisplay();
display.setCursor(0, 0); display.println("Connected to WiFi");
display.display(); delay(1000); display.clearDisplay();
}

```

```

void loop() {

```

```

    if (client.connect(servername, 80)) { client.println("GET /data/2.5/weather?id=" + CityID + "&units=metric&APPID=" +
        APIKEY); client.println("Host: api.openweathermap.org"); client.println("User-Agent: ArduinoWiFi/1.1");
        client.println("Connection: close"); client.println();
    } else {
        Serial.println("connection failed");
        Serial.println(); }

```

```

        while (client.connected() && !client.available()) delay(1);
    while (client.connected() || client.available()) { char c = client.read();
        result = result + c; }

```

```

client.stop();

```

```

// Parse JSON
DynamicJsonDocument doc(1024); deserializeJson(doc, result);

```

```

String location = doc["name"]; String country = doc["sys"]["country"]; float temperature =
doc["main"]["temp"].as<float>(); int humidity = doc["main"]["humidity"];
float windSpeed = doc["wind"]["speed"].as<float>();

```

```

// Send data to ThingSpeak
ThingSpeak.begin(client);
ThingSpeak.setField(1, temperature);
ThingSpeak.setField(2, humidity); ThingSpeak.setField(3, windSpeed); int httpCode =
ThingSpeak.writeFields(channelID, writeAPIKey); if (httpCode == 200) {
    Serial.println("Data sent to ThingSpeak successfully");
} else {
    Serial.print("Error sending data to ThingSpeak. HTTP code: ");
    Serial.println(httpCode);
}

```

```

Serial.println();
Serial.print("Country: ");
Serial.println(country);
Serial.print("Location: "); Serial.println(location);
Serial.print("Location ID: ");
Serial.println(CityID); // Print the City ID you used

```

```
Serial.printf("Temperature: %.2f°C\r\n", temperature); Serial.printf("Humidity: %d %%\r\n", humidity);  
Serial.printf("Wind speed: %.2f m/s\r\n", windSpeed);
```

```
display.clearDisplay(); display.setCursor(0, 0);  
display.setTextCursor(SSD1306_BLACK, SSD1306_WHITE);  
display.print("Location: ");  
display.print(country); display.print(" ");
```

```
display.println(location);  
display.println();  
display.setTextCursor(SSD1306_WHITE, SSD1306_BLACK);  
display.print("Temperature: ");  
display.print(temperature, 2);  
display.print((char)247); display.print("C ");  
display.print("Humidity: ");  
display.print(humidity); display.println("% ");  
display.print("Wind Speed: ");  
display.print(windSpeed, 2);
```

```
display.display();  
delay(60000); // 1 minute delay }
```

2) Write a Embedded C program to Create a Home Automation System that simplifies daily routines(Any 2 devices) by controlling devices remotely.

```
// Home Automation System  
  
// Thingspeak Server dB Public View: https://thingspeak.com/channels/2052162
```

```
#include <DHT.h>  
#define DHTPIN 15  
#define DHTTYPE DHT22 DHT dht(DHTPIN, DHTTYPE);
```

```
#include <WiFi.h>  
#include "ThingSpeak.h" // always include thingspeak header file after other header files and custom macros
```

```
char ssid[] = "Wokwi-GUEST"; // your network SSID (name) char pass[] = ""; // your network password  
int keyIndex = 0; // your network key Index number (needed only for WEP)  
WiFiClient client;
```

```
// Weather station channel details unsigned long  
weatherStationChannelNumber = 2052162; unsigned long  
myChannelNumber = 2052162; const char * myWriteAPIKey =  
"QS963Q0GCOTDY6GY";
```

```
// Timer variables unsigned long lastTime =  
0; unsigned long timerDelay = 30000;
```

```
int statusCode = 0; int field[8] =  
{1,2,3,4};
```

```
int ch1 = 0; int ch2 = 0; int ch3 = 0; int ch4 = 0;
```

```
#define ch1Pin 23  
#define ch2Pin 22  
#define ch3Pin 21 #define ch4Pin 19 float Prevtemp = 0;
```

```
void setup() {  
  Serial.begin(115200); // Initialize serial
```

```
  // Pin Mode declaration  
  pinMode(ch1Pin, OUTPUT);  
  pinMode(ch2Pin, OUTPUT);
```

```
  pinMode(ch3Pin, OUTPUT);  
  pinMode(ch4Pin,
```

```
OUTPUT); dht.begin();
```

```
while (!Serial) { ; } // wait for serial port to connect. Needed for Leonardo native USB  
port only  
// WiFi.mode(WIFI_STA);  
ThingSpeak.begin(client); // Initialize ThingSpeak
```

```
// Connect or reconnect to WiFi if(WiFi.status() != WL_CONNECTED){  
Serial.print("Attempting to connect to SSID: ");  
Serial.println("Wokwi");  
  
while(WiFi.status() != WL_CONNECTED){  
WiFi.begin(ssid, pass); // Connect to WPA/WPA2 network. Change this line if using open or WEP network  
Serial.print("."); delay(5000);  
}  
Serial.println("WiFi Connected"); delay(1000);  
}  
Serial.println("Welcome at Smart Home"); delay(1000);  
}
```

```
void loop() {  
// use ThingSpeak.readMultipleFields(channelNumber, readAPIKey) for private channels statusCode =  
ThingSpeak.readMultipleFields(weatherStationChannelNumber);  
if(statusCode == 200) {
